## Evidence of Homeopathy and gene expression

Test compound	Potencies	Cell type	Effect	REF
<i>Canova complex</i>	11D-12D	Mouse macrophages	↑ expression of 45 genes ↑ expression of 102 genes	(Oliveira et al. 2008)
<i>Carcinosinum</i>	MT, 30C, 200C	DLA cells	↑ specific gene expression (p53 pro-apoptotic)	(Sunila et al. 2009)
<i>Arsenicum alb.</i>	30C	Saccharomyces cerevisiae, E. coli	↑ Resistance to arsenicum toxicity ↓↑ expression of specific genes (apoptotic, stress response proteins)	(Das et al. 2011; De et al. 2012 of Khuda-B.group)
<i>Carcin., Ruta, Hydrastis, Thuja</i>	200C	DLA cells	↑ Apoptosis , ↓↑ Gene expression (whole genome analysis)	(Preethi et al. 2012)
<i>Gelsemium s.</i>	2C, 3C, 5C, 9C, 30C	Human neurocytes SHSY5Y	7 genes ↑ 49 genes ↓ expression (whole genome analysis) ↓ gene expression (RT-Array, 2C)	(Marzotto et al. 2014; Olioso et al. 2014)
<i>Apis mellifica</i>	3C, 5C, 7C, 15C, 30C	Human prostate RWPE-1	↑↓ expression of different groups of genes (whole genome analysis)	(Bigagli et al. 2014, 2016)
<i>Rhus tox.</i>	30X	Primary cultured chondrocytes	↑ gene expression (COX-2), ↓ specific gene expression (collagen II; de-differentiation role)	(Huh et al. 2013)
<i>Arsenicum alb.</i>	45X	Arsenic-intoxicated wheat seeds	↑ Germination ↓ Gene expression levels	(Marotti et al. 2014)
<i>Condurango</i>	30C	H460-non-small-cell lung cancer cells	↓↑ expression of specific genes (apoptotic), ↑ Apoptosis, oxidative stress, mitochondrial depolarization	(Sikdar et al. 2014)
<i>Arnica montana</i>	2C, 3C, 5C, 9C, 15C	THP-1 macrophages	↓ expression of TNF, IL1B, CCL5, MMP1 ↑ expression of CXC chemokines and BMP2 (in IL-4 differentiated cells) and Fibronectin	(Olioso et al. 2016 Marzotto et al, 2016)
<i>Drosera rotundifolia</i>	3D-6D	16HBE bronchial cells	↓ 25 genes ↑ 44 genes, epithelial cell proliferation	(Arruda et al. 2021)

Gene regulatory networks of bronchial cells affected by *Drosera* 3X

# N.T.A. Nano Tracking Analysis.

Figure 5: Comparison of number of particles in pure Lactose 30C and Cuprum metallicum 30C.

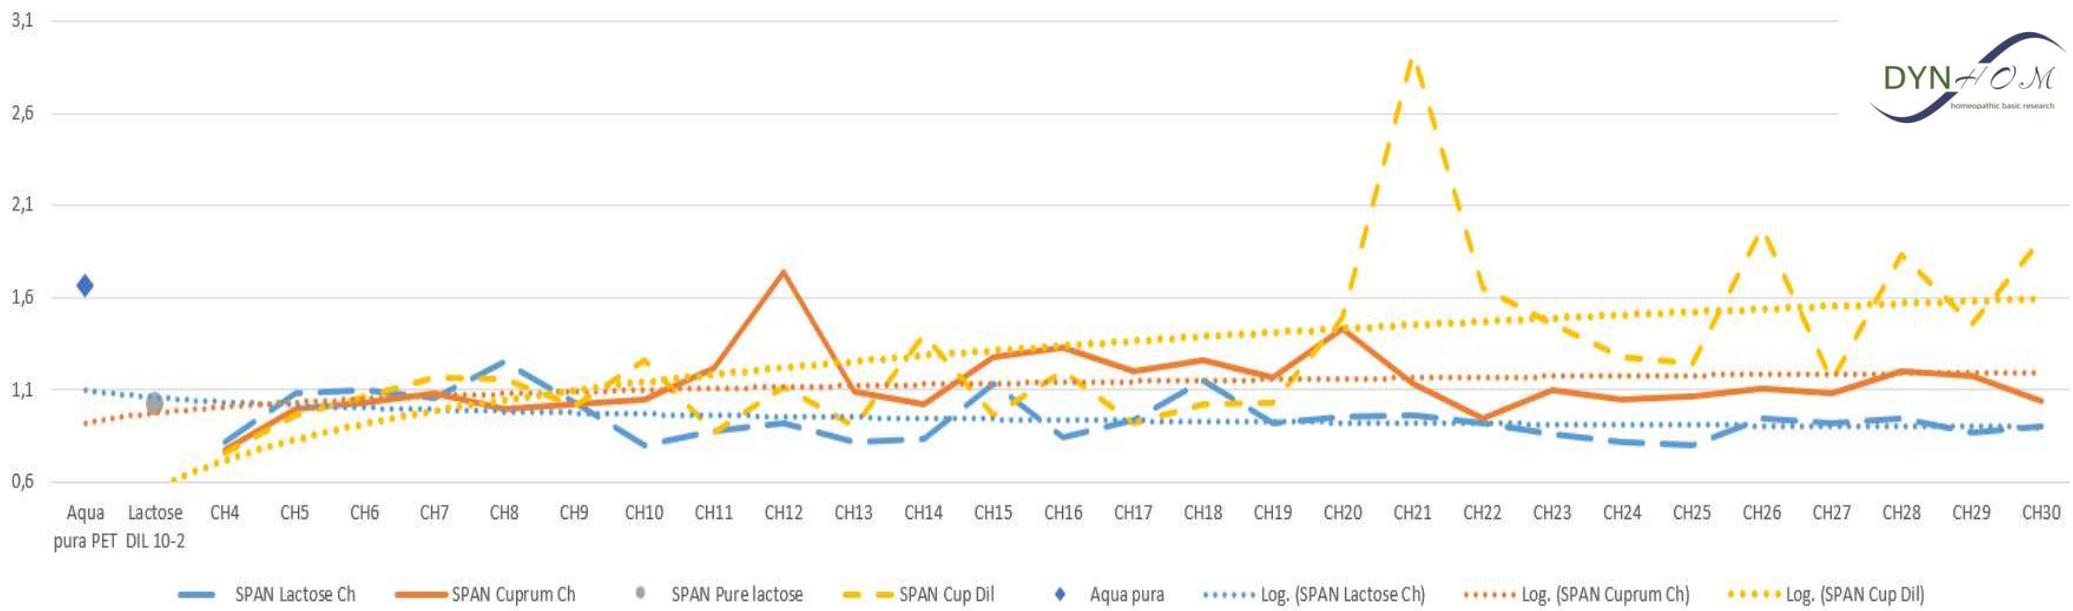

Lactose 30C, 6 pooled manufacturing lines (a,b,c,d,e,f);  
(a) = 7.64e+06 +/- 6.06e+05 particles/ml

Cuprum 30C, 6 pooled manufacturing lines (a,b,c,d,e,f).  
(a) = 8.49e+06 +/- 5.79e+05 particles/ml

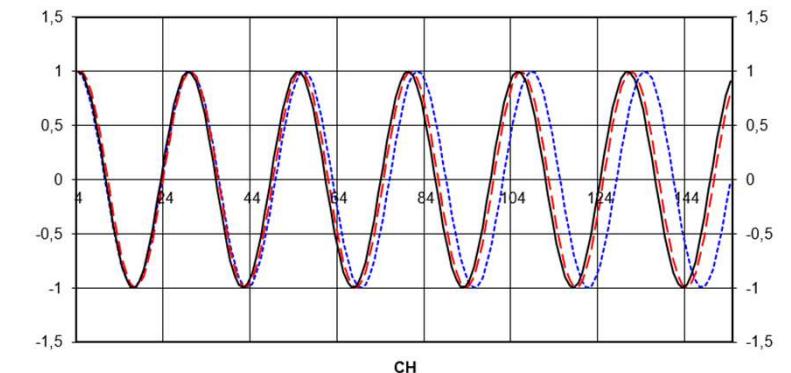

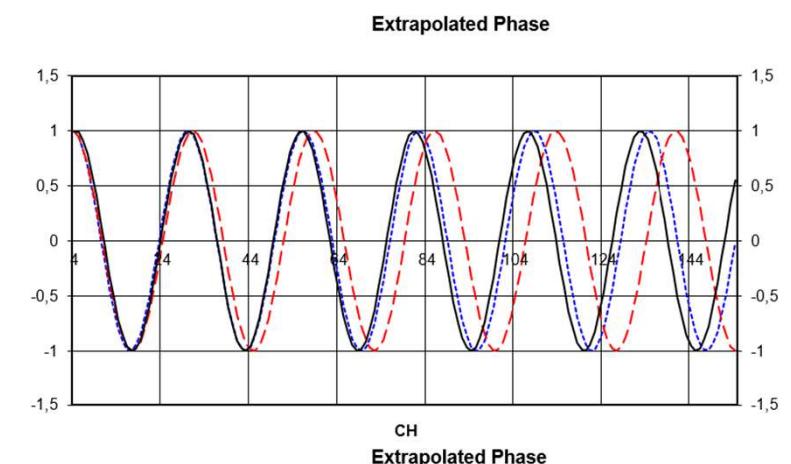

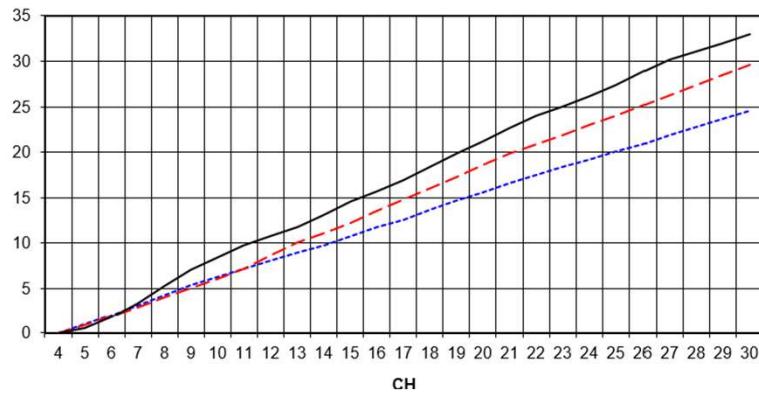

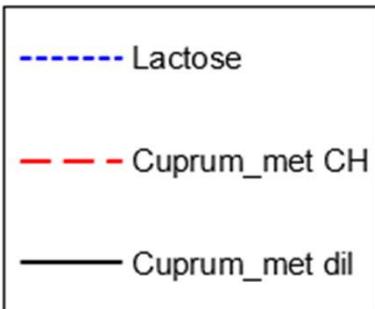

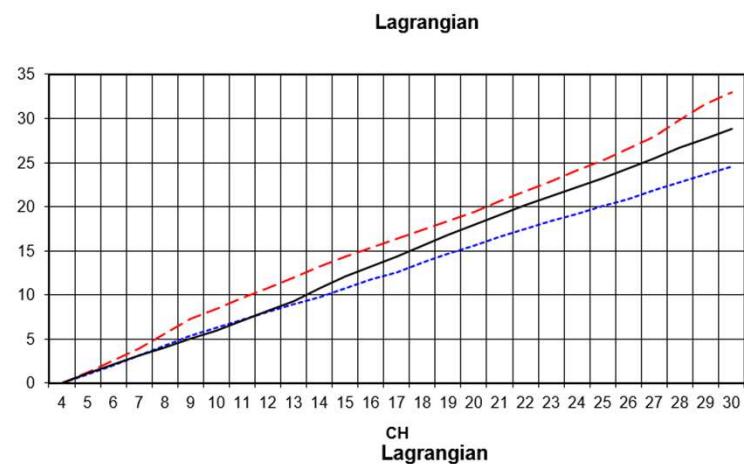

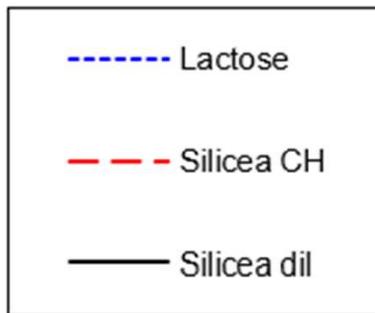

## SPAN (DL90-DL10)/DL50 Lactose CH versus Cuprum CH pooled 6 manufacturing lines

**NTA: This SPAN parameter gives a more precise idea of the extent of the volume distribution of the particles observed (one of their QUALITIES). For the full manufacturing lines, the t-value is 2.68975. The p-value is .004154. The result is significant at  $p < .05$ .**

We can therefore differentiate the QUALITY of the particles of a copper dynamization compared to the "placebo" dynamized lactose or simply diluted copper. Same calculation from 10CH up to 30 CH. The t-value is 3.6507. The p-value is .00023. The result is significant at  $p < .001$ .

# N.T.A. Nanoparticules versus Nanobulles

The higher the dilution/dynamization, the more the nanomaterial is replaced by nanobulls of the same quantity, size and size distribution.

Argentum metallicum - Degazing effect

# Take away Message 3

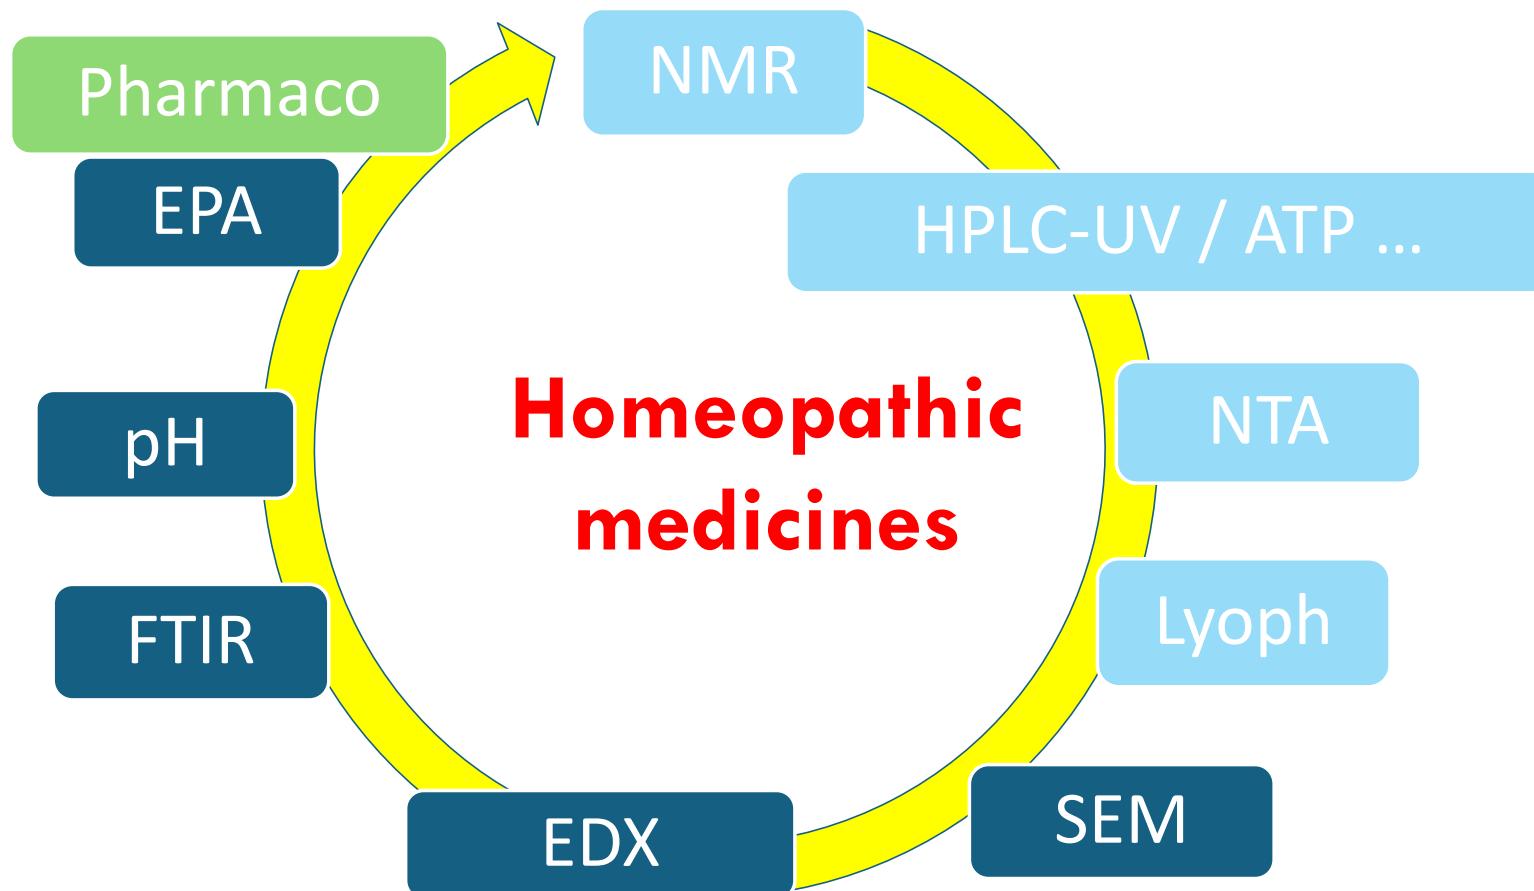

## N.T.A. Nano Tracking Analysis.

- ✓ Presence of nanoparticles in all homeopathic drugs in solution is definitely proven.
- ✓ The particle size distribution depends on the raw material used and its manufacturing method.
- ✓ Initially, the nature of particles is a mixture of material and nanobulls. Material is replaced step by step. During the potentiation process, nanobulls of the same size gradually replace the material.

APMH 2025

# Electro-Photonic Analysis

*the FIJI program allows to convert EPI images, using an algorithm, into FFT (Fast Fourier Transform) images. Here, an unimpregnated globule and a pure solvent impregnated globule.*

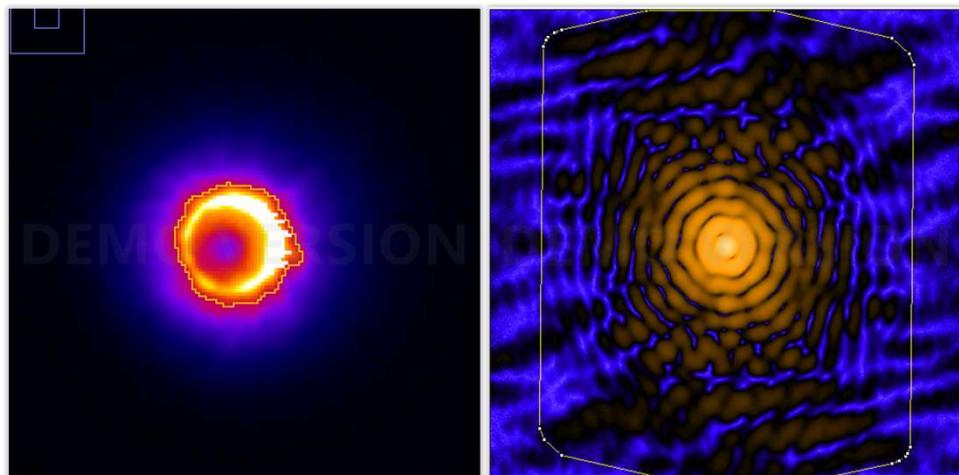

The white circle with little dots added by the FIJI analysis program is aimed to measure the delimited surface about forms and wavelengths intensities. The FFT of the EPI image is performed after setting the intensities in a logarithmic scale. The centre of the image corresponds to the large spatial wavelengths of the image, wavelengths are shorter and shorter going towards the periphery.

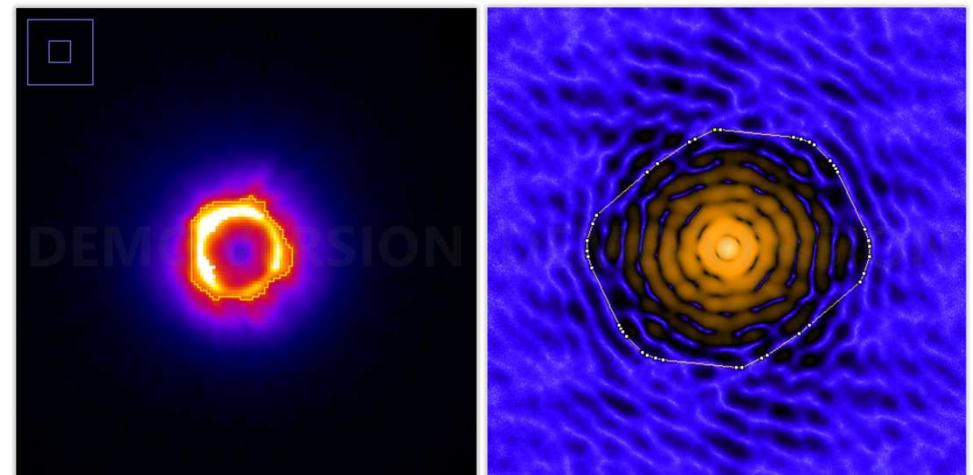

# Electro-Photonic Analysis

*Specific structure of the emitted light*

**CUPRUM 30K globule**

# Electro-Photonic Analysis

Examples of FFT images for dynamizations 6, 12, 30, 200, 1000, 10000, 50000K, starting with the left, for cuprum metallicum at the top and Gelsemium at the bottom.

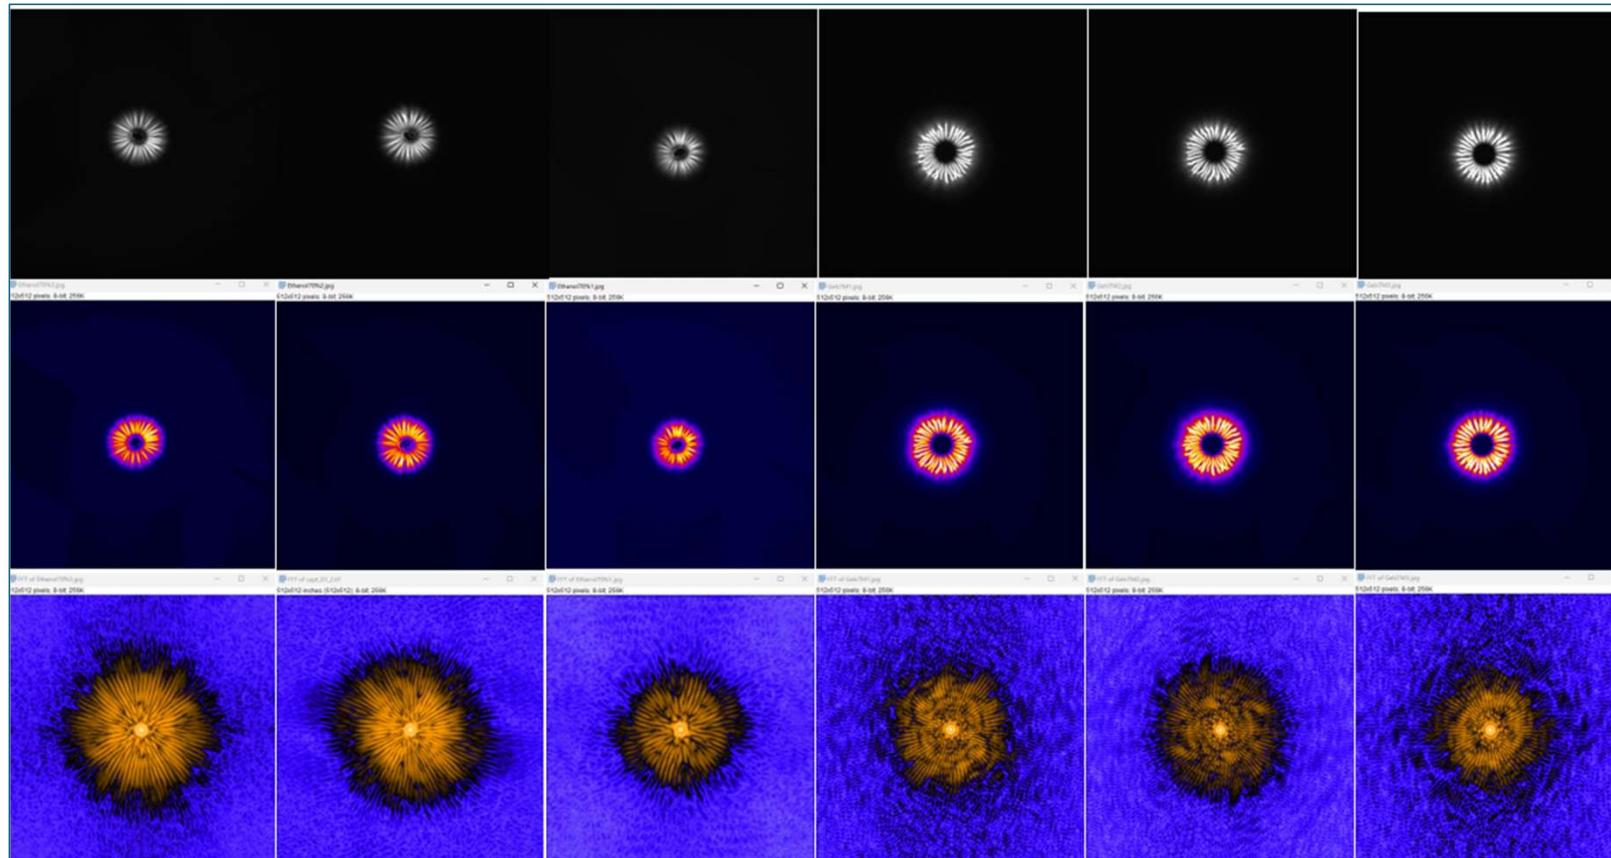

Forms are different for each potency and medicine. We did the same exercise for all cH potencies.

# Electro-Photonic Analyse

Exemples d'images 3xETHANOL 70% à gauche, 3xGELSEMIUM TM à droite.

## Take away Message 9

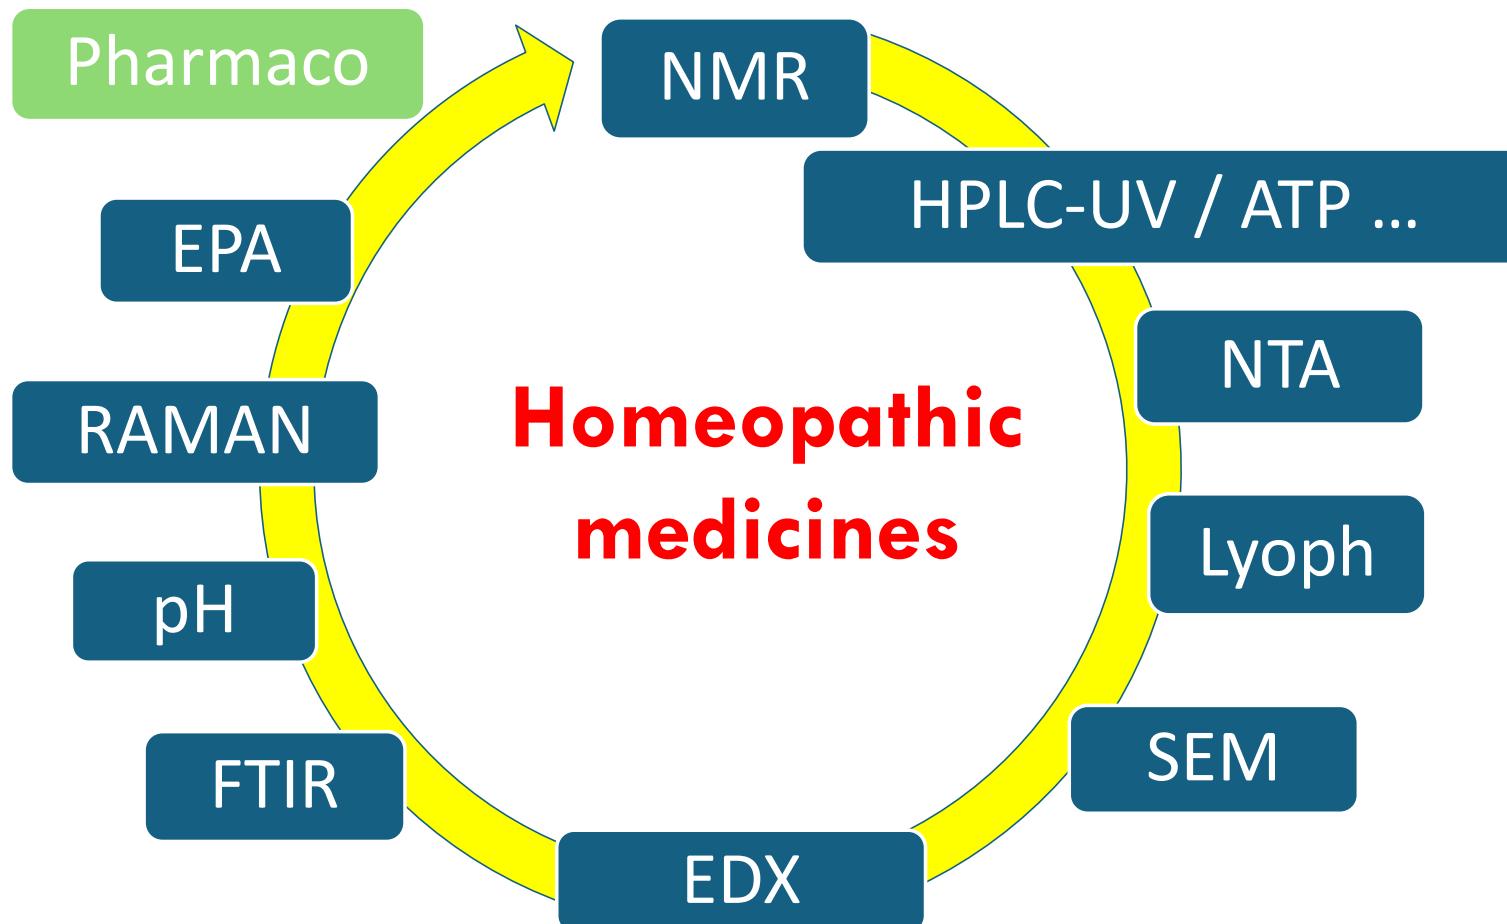

### Electro-Photonic Analysis

- *The method is reproducible: the difference between the 3 images of the same remedy and the same dynamization is not significant.*
- *Discrimination is evident between remedies for most of the 30 particular areas that are analyzed for size, shape, brightness and density.*

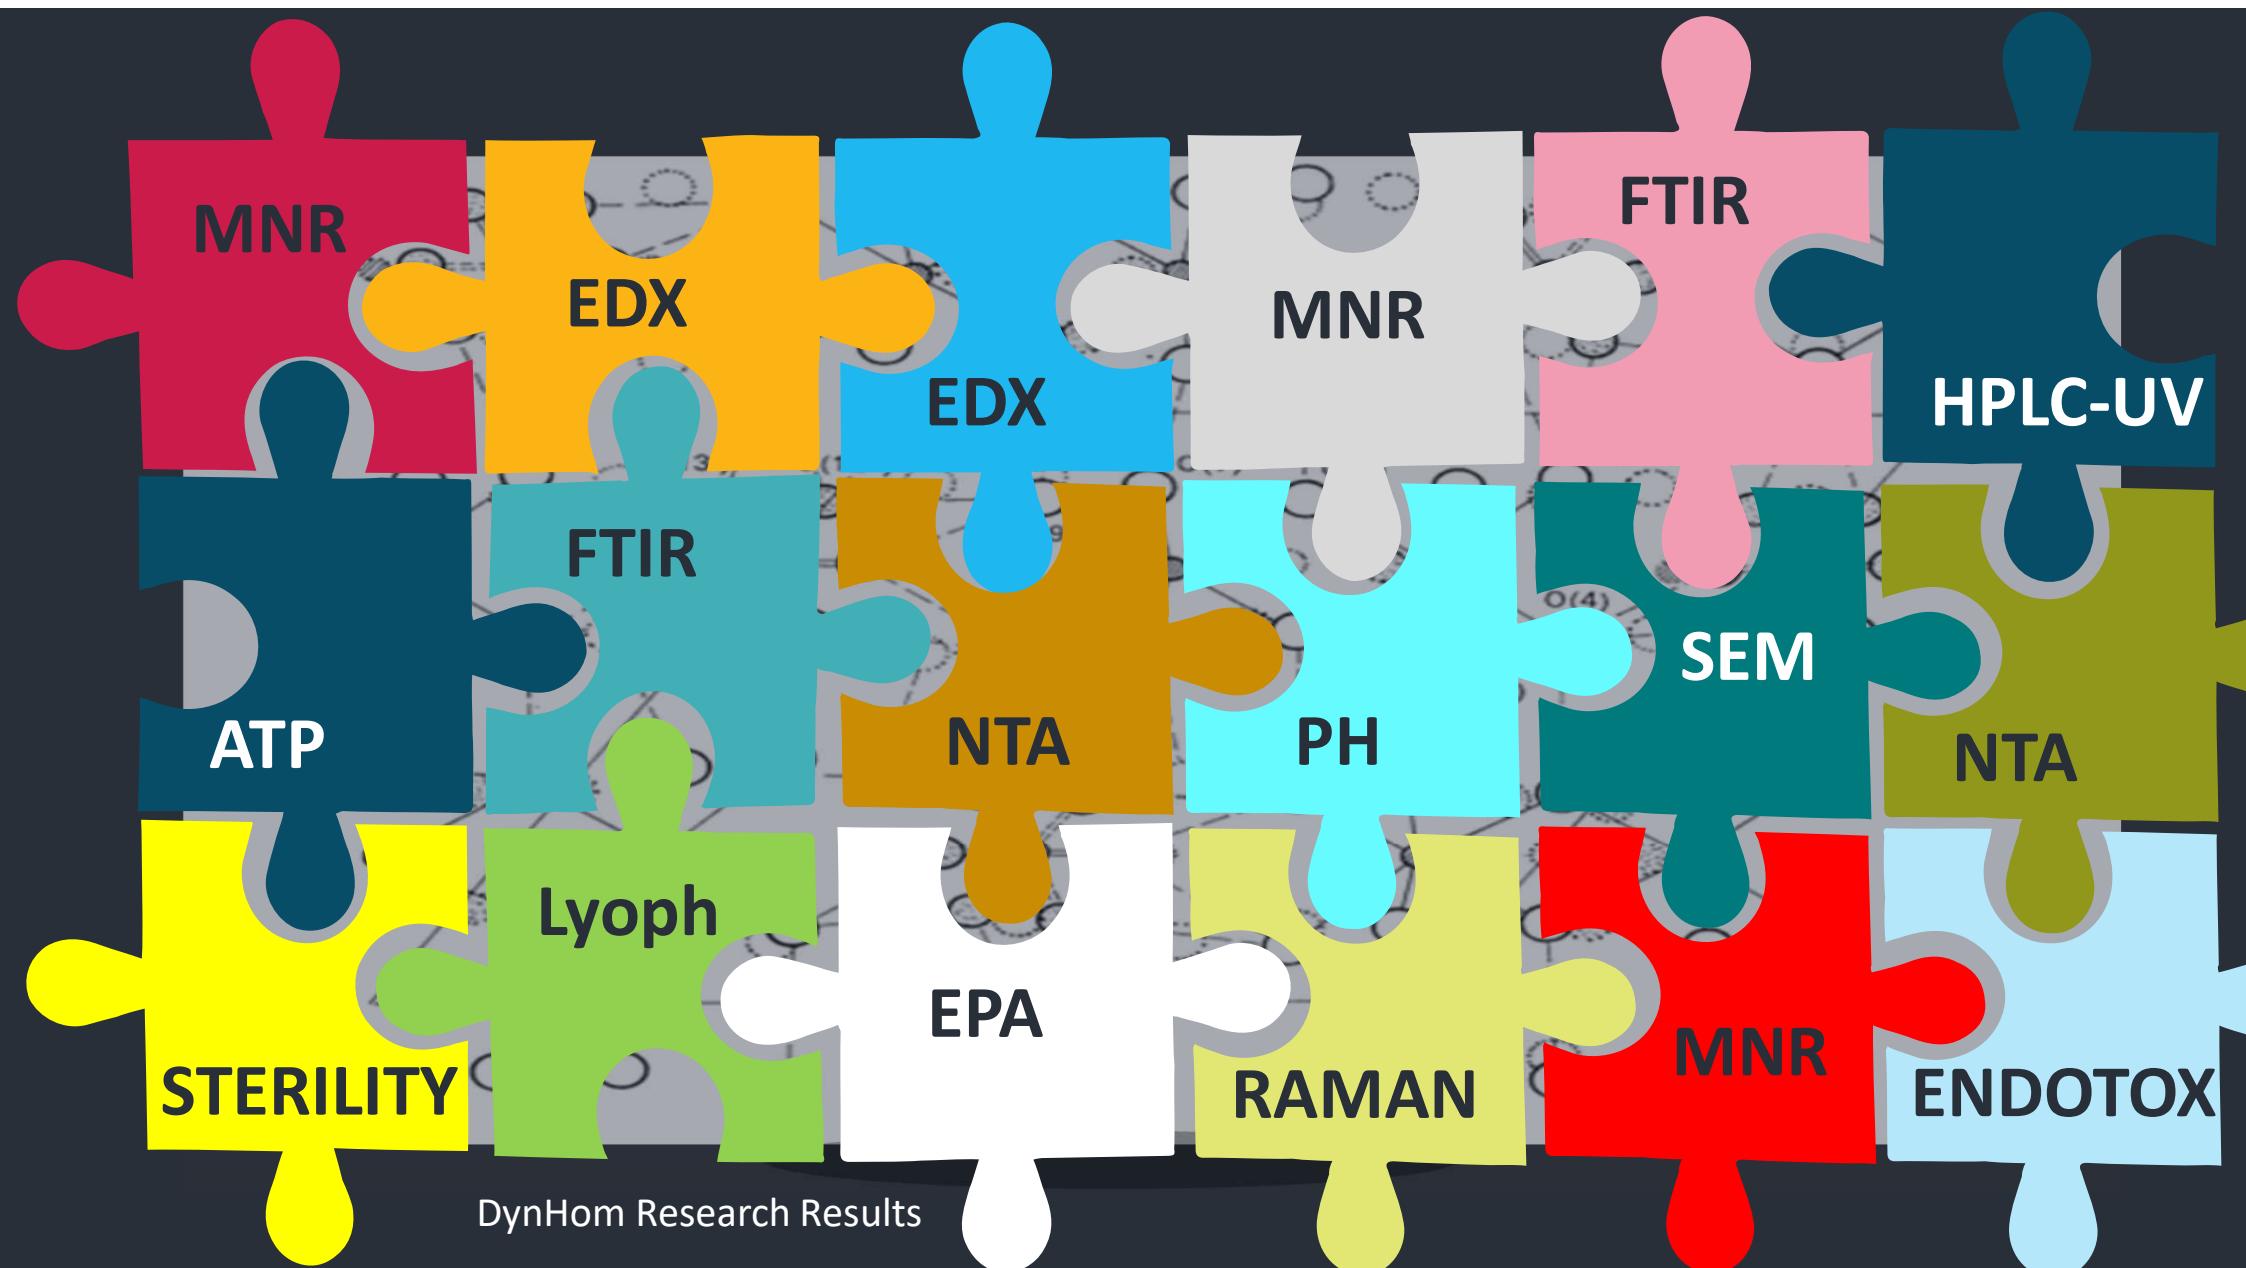

## DynHom Research Program

Dr Michel Van Wassenhoven

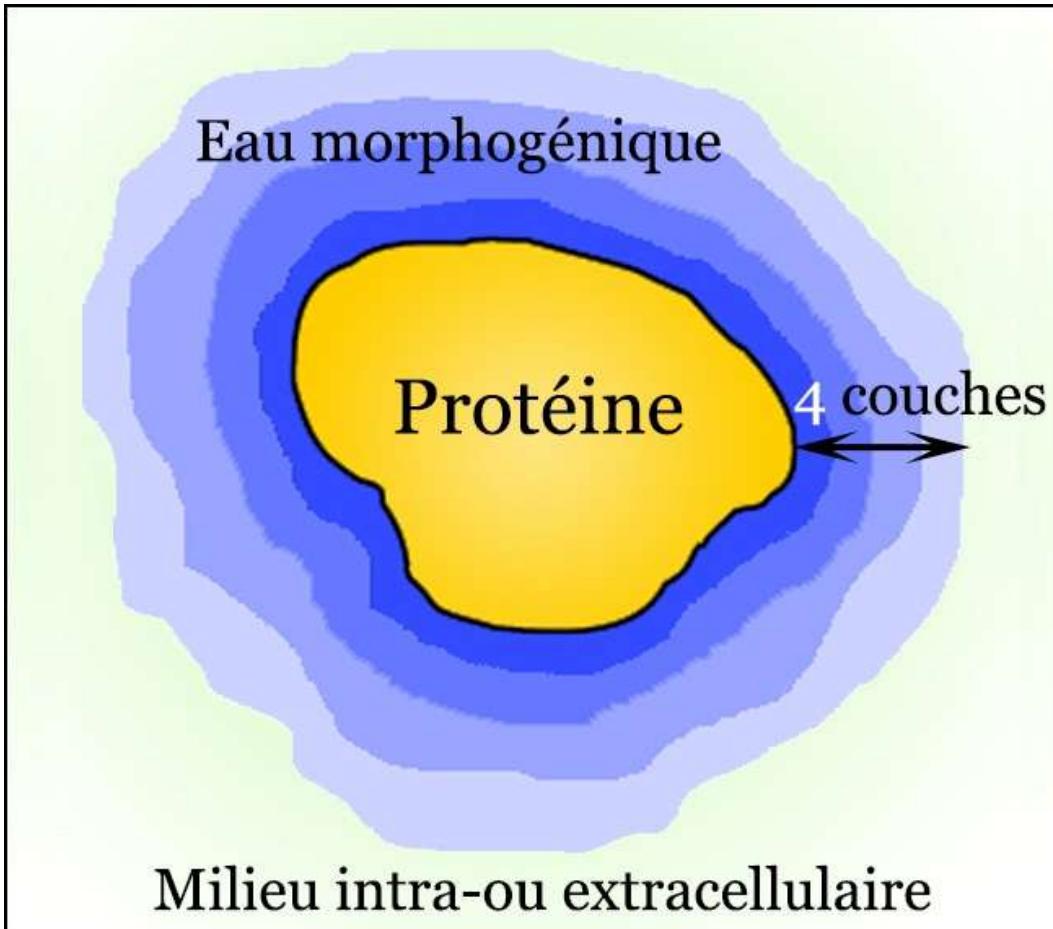

# Pharmacology – Thoughts !

- ✓ Materiality is in fact a support, a visible organization, witness to the presence of something else. It may vary according to the manufacturing methods (e.g glass vs PET ) but always exists in specific proportions.
- ✓ The electric potentials (we are at the level of electrons) are witnesses of the raw material of the start but not of the dynamization.
- ✓ The photons (we are at the wave level) carry the message of the preparation.  
NB: Our measurement methods use light to determine the nature of components.
- ✓ The immaterial fields in the form of coherence domain in this morphogenic water deliver the message.

# Pharmacology – Thoughts!

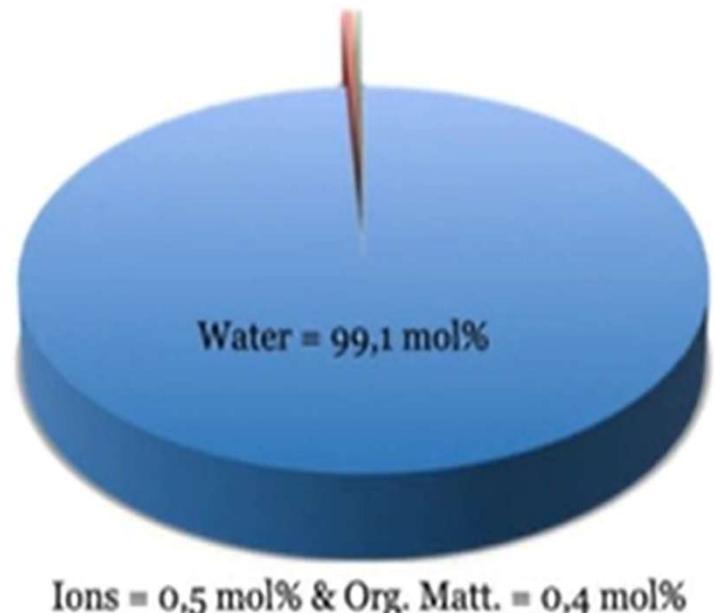

Morphogenic water is a layered structure of water around any material with at least one nanoscale dimension. Because it is indeed a new physical state of the water that must be identified as such. Its characteristic is to be able to adopt a gelatinous form. Intermediate form between liquid and solid state in contact with mineral or organic colloids.

# Pharmacology – Thoughts!

Molecular composition of a living cell

*Escherichia coli* ≈ 70 wt% H<sub>2</sub>O, mass =  $7 \cdot 10^{-13}$  g, L ≈ 1 μm, R = 0,5 μm  
 ≈ 22 billions 440 millions water molecules

Conclusion: water is life

Dr Michel Van Wassenhoven

**Water is the major element of any cell. Everything else (including DNA-RNA) is very little compared to water.**

**But this water is organized around everything else.**

**Water is life!**

APMH 2025

# Pharmacology– Thoughts!

**Dynhom allows to look into the « material »**

\*

**It is structured (NMR) and organized around nanoparticles (NTAs)  
swimming in “salt water” (SEM-EDX-FTIR).**

\*

**But even at the level of the nanometer (H<sub>2</sub>O) there is more  
vacuum than material !**

\*

**So is this vacuum useless = NOTHING?**

# Pharmacology– Thoughts!

**Professor Marc Henry would tell you here that matter can be, in fact, looked at by considering only what we see (materiality).**

\*

**The look towards the invisible (vacuum) of this materiality is another point of view.**

\*

**Welcome to the world of waves and fields.**

# Pharmacology – Thoughts!

**This is where Professor Marc Henry would tell us about quantum physics!**

Dr Michel Van Wassenhoven

APMH 2025

# Nature and composition of homeopathic medicines !

## Tribute to Professor MARC HENRY

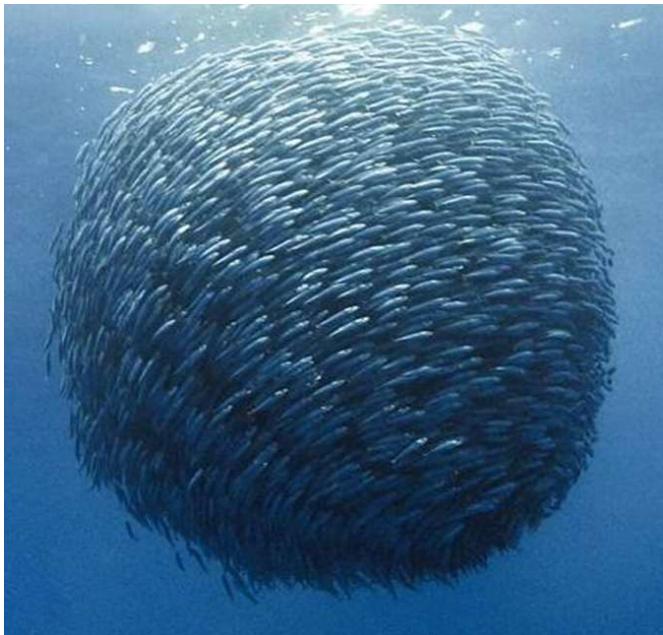

# Pharmacology – Thoughts!

You only see this phenomenon if you cannot count the “elements”.

How do we explain these natural behaviors?

Concept of phasing and energy in quantum physics.

There is an “organization”, one would expect a chaos, there is none.

# Pharmacology – Thoughts!

**Chaos = phasing incoherence = classical physics.**

\*

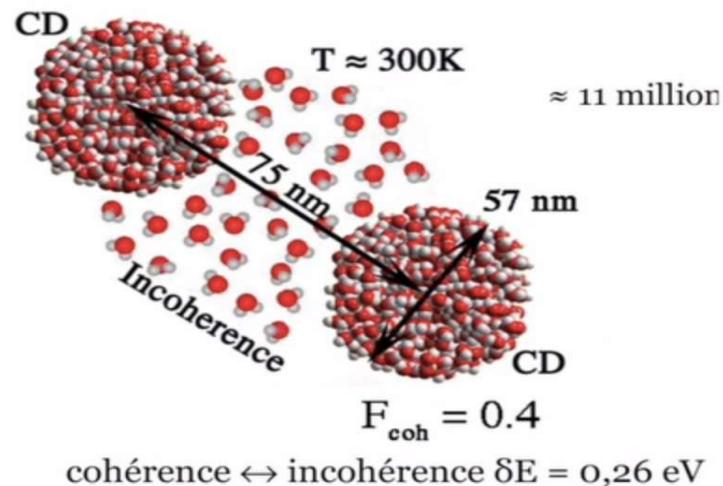

**Phasing coherence = quantum physics.**

- In phasing coherence, water molecules (countless) are organized around nano-objects.
- Water becomes structured, a structuring at the scale of 100nm that become «coherence areas».
- The focus should not be on the “materiality” of the water molecule but on its organization (water – empty – electromagnetic field).
- Working on water is more important than working on another cell component.

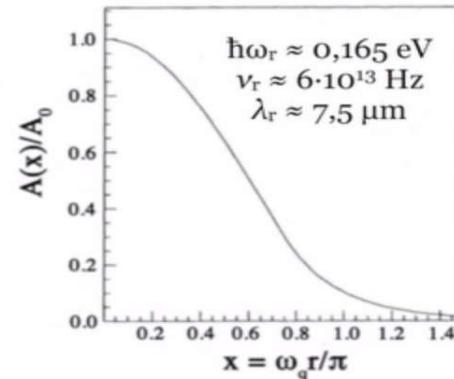

# Pharmacology – Thoughts!

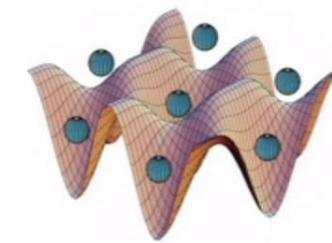

Structuration de l'eau en domaines de cohérence (DC)

Temp./°C	Cohérent	Incohérent
-40°C	100 %	0 %
0°C	50 %	50 %
30°C	40 %	60 %
100°C	0 %	100 %

Sensibilité aux champs  
(électro)magnétiques

« Mémoire de l'eau »

"Ballade des mystères de l'eau" Pr Marc Henry

# Pharmacology – Thoughts!

**Quantum physics = no space, no time but phasing  
and energy (fields).**

\*

**Time, space and matter are creations of the phasing  
and available energy**

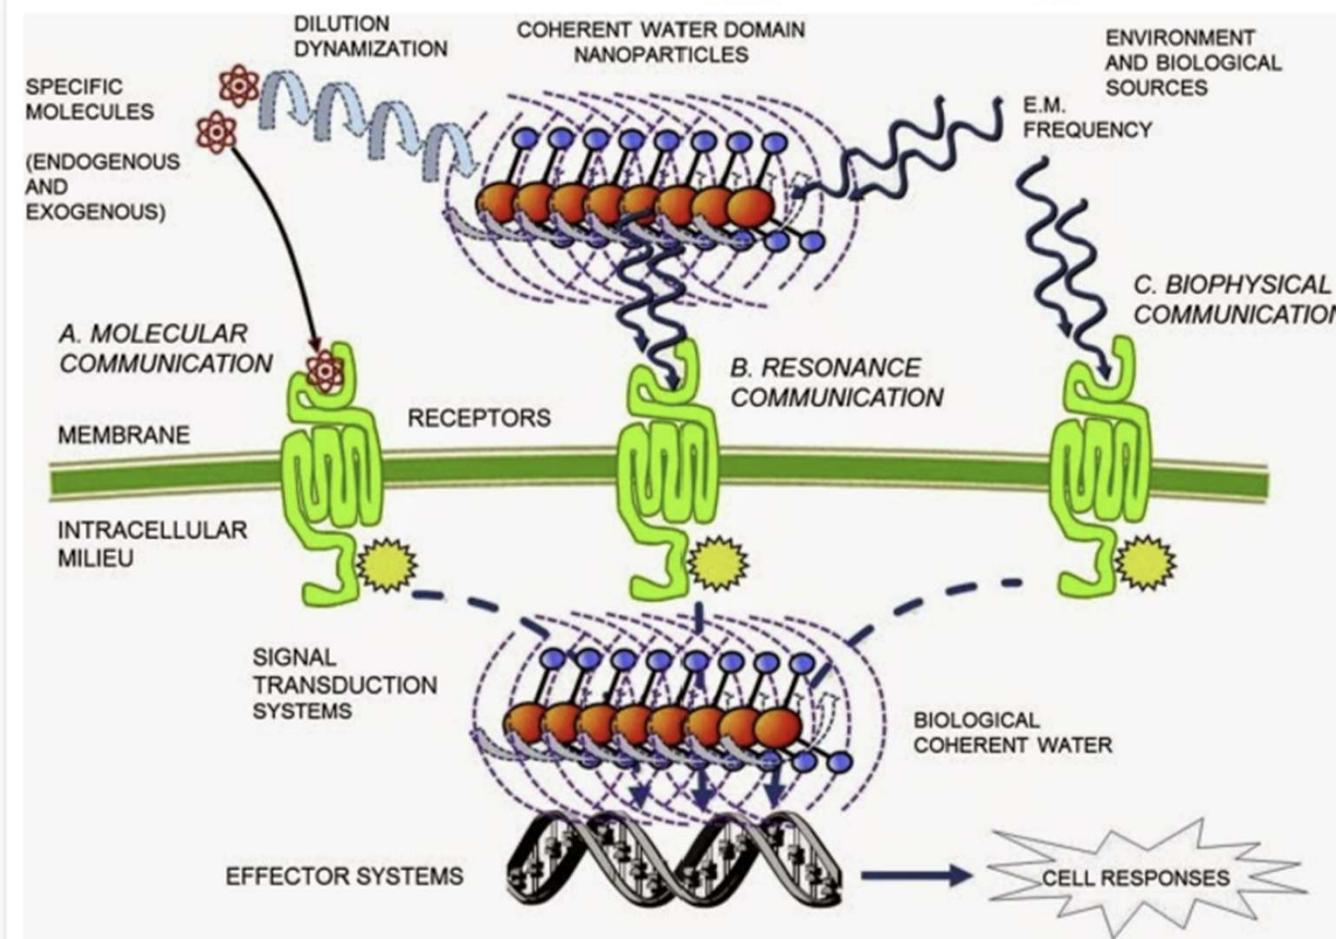

# Nature and composition of homeopathic medicines !

## Tribute to Professor MARC HENRY

# Pharmacology – Thoughts!

**According to P. Bellavite, the electromagnetic frequencies trapped within the coherence fields represent one of the modes of cellular communication.**

## Take away Message 10

- Individualisation as the key to a "dynamic pharmacology".
- More research on "polarized systems".
- Quantum approach for homeopathic and epigenetics.

Dr Michel Van Wassenhoven

La nature et la composition des médicaments homéopathiques !

## HOMMAGE au PROFESSEUR MARC HENRY

# Et la suite ...

BIC : CKCCBEBB**

- « La recherche DynHom est axée sur le médicament (nature – signature). On l'approche (sans le voir directement) par sa structure, sa matière, le solvant et des traces lumineuses. Cette préparation pharmaceutique dynamisée est nécessaire pour garder l'information, les champs. Elle explique l'action épigénétique du remède (travaux d'autres équipes) et ainsi faire le lien vers les pathogénésies et les études cliniques. »

Dr Michel Van Wassenhoven
